Experiment 1

Student Name: Sarthak Arora
Branch: CSE
Semester: 5th
Subject Name: PBLJ

UID: 23BCS12984
Section/Group: KRG_2B
Date of Performance: 12/08/25
Subject Code: 23CSH-304

1. Aim:

To design and implement Java programs for analyzing strings, performing matrix operations, and simulating a basic banking system using object-oriented concepts.

- **Part A – Easy Level:**

- To analyze a user-input string and count vowels, consonants, digits, and special characters.

- **Part B – Medium Level:**

- To implement matrix operations (addition, subtraction, multiplication) with validation of dimensions.

- **Part C – Hard Level:**

- To create a basic banking system with account creation, deposit, and withdrawal functionalities ensuring no overdraft.

2. Objective:

- ✓ To understand string manipulation and character classification in Java.
- ✓ To apply conditional statements for analyzing vowels, consonants, digits, and special characters.
- ✓ To implement multidimensional arrays and validate dimensions for performing matrix operations.
- ✓ To apply nested loops for addition, subtraction, and multiplication of matrices.
- ✓ To design and implement a basic banking system using object-oriented programming concepts.
- ✓ To strengthen Java programming skills in strings, arrays, and object-oriented design.
- ✓ To encapsulate account details and ensure safe deposit and withdrawal operations with overdraft protection.

3. JAVA script and output:

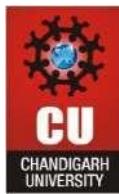

EASY-LEVEL PROBLEM

```
import java.util.Scanner; public class
StringAnalysis {
    public static void main(String[] args) { Scanner
        sc = new Scanner(System.in);
        System.out.print("Enter a string: "); String str
        = sc.nextLine();

        int vowels = 0, consonants = 0, digits = 0, special = 0; str =
        str.toLowerCase();

        for (int i = 0; i < str.length(); i++) { char ch =
            str.charAt(i);
            if ("aeiou".indexOf(ch) != -1) { vowels++;
            } else if (ch >= 'a' && ch <= 'z') {
                consonants++;
            } else if (ch >= '0' && ch <= '9') { digits++;
            } else if (ch != ' ') { special++;
            }
        }

        System.out.println("Vowels: " + vowels);
        System.out.println("Consonants: " + consonants);
        System.out.println("Digits: " + digits);
        System.out.println("Special Characters: " + special);
    }
}
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

Output:

```
Output
Enter a string: hiee tanisha 123!
Vowels: 6
Consonants: 5
Digits: 3
Special Characters: 1

==== Code Execution Successful ====
```

Figure 1:Easy Problem Output

MEDIUM LEVEL PROBLEM:

```
import java.util.Scanner;

public class MatrixOperations {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter rows and columns for Matrix A: ");
        int r1 = sc.nextInt(), c1 = sc.nextInt();
        System.out.print("Enter rows and columns for Matrix B: ");
        int r2 = sc.nextInt(), c2 = sc.nextInt();

        int[][] A = new int[r1][c1];
        int[][] B = new int[r2][c2];

        System.out.println("Enter elements of Matrix A:");
        for (int i = 0; i < r1; i++)
            for (int j = 0; j < c1; j++)
                A[i][j] = sc.nextInt();

        System.out.println("Enter elements of Matrix B:");
        for (int i = 0; i < r2; i++)
            for (int j = 0; j < c2; j++)
                B[i][j] = sc.nextInt();

        if (r1 == r2 && c1 == c2) {
            System.out.println("Addition:");
            for (int i = 0; i < r1; i++) {
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
for (int j = 0; j < c1; j++)
    System.out.print((A[i][j] + B[i][j]) + " ");
    System.out.println();
}

System.out.println("Subtraction:");
for (int i = 0; i < r1; i++) {
    for (int j = 0; j < c1; j++)
        System.out.print((A[i][j] - B[i][j]) + " ");
        System.out.println();
}
} else {
    System.out.println("Addition and Subtraction not possible");
}

if (c1 == r2) {
    System.out.println("Multiplication:");
    int[][] result = new int[r1][c2];
    for (int i = 0; i < r1; i++) {
        for (int j = 0; j < c2; j++) {
            for (int k = 0; k < c1; k++)
                result[i][j] += A[i][k] * B[k][j];
            System.out.print(result[i][j] + " ");
        }
        System.out.println();
    }
} else {
    System.out.println("Multiplication not possible");
}
}
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

Output:

```
Output
Enter rows and columns for Matrix A: 2 2
Enter rows and columns for Matrix B: 2 2
Enter elements of Matrix A:
4 5 2 1
Enter elements of Matrix B:
4 2 1 7
Addition:
8 7
3 8
Subtraction:
0 3
1 -6
Multiplication:
21 43
9 11

==== Code Execution Successful ====
```

Output:

```
run:  
Create Account:  
Name: Tanisha  
Account Number: 12542  
Initial Balance: 1000000  
Enter amount to Deposit: 500000  
Deposit successful! Current Balance: 1500000.0  
Enter amount to Withdraw: 54000  
Withdrawal successful! Current Balance: 1446000.0  
BUILD SUCCESSFUL (total time: 30 seconds)
```
